Feedback 1 - Danny

- Can link your "learn more" button about the featured vehicle to the actual vehicles site and info. Or, can make a separate new page of info regarding the vehicle.
- Nav href links

Feedback 2 - Alex

- Wants full background image but also transparents. Make opacity edits with bg image for home page
- Href link specific buttons for nav or an outside link

Feedback 3 - Me

- The navigation bar links are spaced unevenly. Some links sit further apart than others, and the spacing should be even.

The uneven spacing came from each list item having flex: 1 with right-aligned text, so every link got an equal-width box and the gap between words changed with the length of the word. I removed that and gave every link the same 25px spacing, moved the links onto the same row as the logo on larger screens (matching my wireframes), and did the same for the footer links.

Other changes made while reviewing against the wireframes

- Added the toggle menu for small screens on every page.
- Added a slideshow with previous and next arrows, dot indicators, and auto advance on the Gallery page.
- Added the viewport meta tag to every page so the small screen layout works on phones.
- Updated the "Made With Care" section on the home page to the three headed features shown in the wireframe.
- Gave every occasion card on the home page a link to a page with more information.
